Information Graphics

© 2009 Cisco Systems, Inc. All rights reserved.

Informational Graphics

- Informational graphics are a library of graphic shapes used to develop charts, diagrams, and abstract visuals. These graphics help illustrate business and technology ideas while maintaining brand compliance and consistency across Cisco presentations
- They also serve as a reference point when developing new and different graphics
- This library is not static and will be updated on a quarterly basis

© 2009 Cisco Systems, Inc. All rights reserved. Cisco Confidential

How to Use Them

- Use simple shapes to create charts or diagrams. When Photos are too general, and Network Diagram Icons are too specific, use Informational Graphics to help illustrate business and technology ideas
